

18

(2) 図の四角形 I を考えよ.

$$I \times 6 = \text{図} = 36 - 3 \times 3$$

$$= 36 - \frac{49}{9} \times 3 = \frac{59}{3}$$

$$I = \frac{59}{3} \times \frac{1}{6} = \frac{59}{18}$$
